

B2B HOW IT SHOULD BE.

So Fresh, So Clean

Clean up your settings for quick & easy B2B

With a busy year of business ahead it's time to brush off the dust that might be holding back your B2B performance.

Avoid using the back button

The 'Back' button can adversely affect how Elastic performs. Instead, return to the Home Dashboard screen by clicking on the brand logo at the top of each page.

Clear your cache

As your browser builds up cache, it starts to slow things down. Try clearing your cache every 1-2 months for optimal speed performance, security, and more.

Restart your computer

"Have you tried restarting your computer?" All jokes aside, rebooting your system at least once a week can help keep things running smoothly for any application.

By following these 3 best practices you can optimize how your time is spent while doing business online.
